

JavaScript Interview & Problem Solving Handbook

- 100 Questions

Array (1-25)

1. Find highest scoring student
2. Find lowest scoring student
3. Find second largest number
4. Find second smallest number
5. Remove duplicates
6. Most frequent element
7. Rotate array by k positions
8. Find missing number
9. Move zeros to end
10. Merge two sorted arrays
11. Check if array is sorted
12. Find intersection of two arrays
13. Find union of two arrays
14. Chunk array into groups
15. Flatten nested array
16. Find pair with target sum
17. Maximum subarray sum
18. Product of array except self
19. Count even and odd numbers
20. Reverse array without built-in methods
21. Group numbers by parity
22. Find duplicate elements
23. Sort array of objects by property
24. Find top 3 largest values
25. Inventory unsold products

String (26-50)

26. Count word frequency
27. Reverse a string
28. Check palindrome
29. Count vowels
30. Count consonants
31. Find longest word
32. Capitalize first letter of every word
33. Check anagram
34. Remove duplicate characters
35. Find first non-repeating character
36. String compression
37. Check rotation of string
38. Count character frequency
39. Convert snake_case to camelCase
40. Convert camelCase to snake_case
41. Validate email format
42. Extract hashtags
43. Find longest substring without repeating chars
44. Check balanced brackets
45. Mask credit card number
46. Count sentences
47. Title case conversion
48. Word occurrence counter
49. Remove extra spaces
50. Find common words between strings

Object (51-70)

- 51. Department salary report
- 52. Merge two objects
- 53. Deep clone object
- 54. Count properties
- 55. Invert key-value pairs
- 56. Group users by age
- 57. Find employee with highest salary
- 58. Convert object to array
- 59. Convert array to object
- 60. Nested object property finder
- 61. Update object immutably
- 62. Remove null properties
- 63. Compare two objects
- 64. Aggregate sales by category
- 65. Student grade report
- 66. Frequency map using object
- 67. Flatten object
- 68. Build shopping cart summary
- 69. Create leaderboard
- 70. Count users by city

Mixed Problem Solving (71-100)

- 71. Two sum
- 72. Three sum
- 73. Longest consecutive sequence
- 74. Valid parentheses
- 75. Queue using stacks
- 76. Stack using queues
- 77. LRU cache simulation
- 78. Debounce implementation
- 79. Throttle implementation
- 80. Custom map function
- 81. Custom filter function
- 82. Custom reduce function
- 83. Implement memoization
- 84. Event emitter
- 85. Promise.all polyfill
- 86. Promise.race polyfill
- 87. Task scheduler
- 88. Rate limiter
- 89. URL query parser
- 90. JSON flattener
- 91. Tree traversal
- 92. Build comment hierarchy
- 93. Find kth largest element
- 94. Sliding window maximum
- 95. Detect cycle in linked list
- 96. Implement binary search
- 97. Implement quick sort
- 98. Implement merge sort
- 99. Pagination utility
- 100. Mini analytics dashboard processor
